## Why this bulletin?

We hope that this information will be of use to some teachers for curriculum work. Information is provided with the purpose of supporting the Technology 5- 14 curriculum, and touches upon all three strands. We are happy to work up particular items in order to meet particular curriculum needs . The bulletins can be used “live” as they come or can be kept and copied for future use. Site visits will also be possible at times.

Glachbeg Croft – will be opening to provide a context for curriculum delivery in the Spring of 2005. Glachbeg Croft is not just an environmental education centre. Its use is limited only by imagination.

The excavator digs out the footings for the wall, and pegs are inserted to mark the upper level of the concrete

The “Ready mixed” concrete arrives and is emptied into the bucket of the excavator, that then carries it around the trench to fill to the marked level. The concrete is then worked with a spade and then finally levelled with a board.

## Block work.

?

On top of the concrete layers of concrete blocks are laid to form the base for the walls. However the brick layer should have been here last Saturday – but hasn't turned up. We're looking for another one- so the project is delayed .
